### Course Purpose

If you're seeking AutoCAD Certification, AutoCAD 2009 Online Certification Training Program is an essential tool. AutoCAD 2009 is used in many industries, including mechanical

and civil engineering, architecture, and facilities planning and management. More employers are using AutoCAD than any other computer-aided design system, and those employers need skilled employees.

First released in 1982, AutoCAD is now the leading program for computer-aided design (CAD) throughout the world. This Online Certification Training Program takes a step-by-step approach to learning the 2D tools associated with AutoCAD 2009, starting with a few basic tools to let you create and edit a simple drawing, and then gradually introducing more advanced tools. Examples and practice exercises are taken from a variety of the fields where AutoCAD is used.

Once you master the basic skills, you'll move on to explore efficiency tools, complex objects, using external reference and image files, advanced plotting, and enhancing productivity with simple customization. This program focuses only on the 2D tools; 3D tools aren't discussed. As part of this program, you'll receive the required textbook and a 13-month student license for AutoCAD 2009.
